

Public consultation on the needs for Internet speed and quality beyond 2020

GENERAL INFORMATION ABOUT THIS PUBLIC CONSULTATION

The European Commission has prepared this public consultation to look into the needs for Internet speed and quality beyond 2020. The purpose is to assess and understand those needs better with a view to developing public policy to accompany investors in the deployment of future-proof connectivity networks and to ensure that all users, e.g. households, businesses, public institutions, can take advantage of the digital economy and society. This public consultation is addressed to everyone (citizens, businesses, NGOs, public authorities, etc.) and every sector (from agriculture to ICT, from education to automotive, services and industry) which has an interest in ensuring that their future Internet connectivity needs are fully met.

Some of the questions below make a distinction between fixed and mobile connectivity. Fixed connectivity is to be understood as connectivity available at a fixed location, e.g. at home or at work (and not necessarily on a fixed line). Mobile connectivity is to be understood as connectivity available to individual users and objects “on the move”, e.g. when commuting, when travelling, in shopping centres, in stadiums, etc.

Most of the questions below are designed to be answerable by all stakeholders, with various levels of technical details. A few questions, however, are more complex and addressed in particular to respondents who have a deep knowledge of connectivity quality features and their forthcoming evolution. The attached document gives definitions / examples of connectivity features, as well as further background, that aim at helping respondents to better understand some of the questions.

Background and definitions for the public consultation on the needs for Internet speed and quality 2020

- No publication - your answer will not be published but it may be used internally by the Commission. Note that your answer may be subject to a request for public access to documents under Regulation (EC) No 1049/2001.

QUESTIONS

All questions are optional. Please reply consistently either as an individual or as an organisation or a public authority as per your responses to the "information about you" section.

1. Is your / your organisation's main Internet connection (the one you pay for if you reply as an individual or your organisation pays for if you reply as an organisation)?

- A residential connection (fixed or bundled)
- A professional connection
- A leased line
- A mobile only connection

2. What is the maximum number of devices (e.g. computers, tablets, smart phones, televisions, assistive technologies, cameras, sensors and other connected objects) that share simultaneously the same main connection in your organisation / household?

- Less than 3
- Between 3 and 5
- Between 6 and 10
- More than 10

Please specify.

3. How do you think that the maximum number of devices that will share simultaneously the same main connection in your organisation / household will evolve by 2025?

- Decrease
- Remain stable
- Increase slightly
- Increase significantly

Please specify.

4a. Which of the following Internet services and applications do you / does your organisation use and how often?

	Continuously through fixed connectivity	At least once a day through fixed connectivity	At least once a week through fixed connectivity	At least once a month through fixed connectivity	At least once a year through fixed connectivity	Continuously through mobile connectivity	At least once a day through mobile connectivity	At least once a week through mobile connectivity	At least once a month through mobile connectivity	At least once a year through mobile connectivity

5. Among the Internet services, applications, content and products mentioned in questions 4a, 4b and 4c , how many at most do you / does your organisation use simultaneously through the same fixed connection?

- 1
- 2-3
- 4-5
- 6-10
- More than 10

Please specify.

6a. How do you think your / your organisation's uses of the following Internet services and applications will evolve by 2025 compared with today?

	Not used anymore through fixed connectivity	Less used through fixed connectivity	Used the same through fixed connectivity	More used through fixed connectivity	Not used anymore through mobile connectivity	Less used through mobile connectivity	Used the same through mobile connectivity	More used through mobile connectivity

7. How do you think that the maximum number of Internet services and applications that you / your organisation use(s) simultaneously through the same fixed connection will evolve by 2025?

- Decrease
- Remain stable
- Increase slightly
- Increase significantly

Please specify.

This question, sadly, does not make sense, not least because it requires respondents to guess how many useful applications will be invented in the next nine years.

The overall number of applications could rise, but they could be low-bandwidth, and therefore have a minimal impact on services, or could fall, but the applications being used could demand more bandwidth.

We firmly believe, therefore, that the responses to this question will not produce credible responses on which policy can be based.

8. In your view, how important are / will be the following features of **fixed** connectivity?

14. Overall, do you feel that your / your organisation's current fixed and/or mobile connectivity needs are fulfilled?

- Fully fulfilled
- Partially fulfilled
- Not at all fulfilled
- I don't know

14a. If you replied "partially fulfilled" or "not at all fulfilled", please specify what you think should be done for your current connectivity needs to be fully fulfilled.

Reality checks with the speeds and quality advertised by ISPs. The Commission, BEREC and NRAs should consider investing in crowdsource analysis of the market offers to monitor and penalise irregularities. E.g. <http://broadband.mpi-sws.org/transparency/bttest.php>

15. Overall, are you optimistic that your / your organisation's future fixed and/or mobile connectivity needs will be fully fulfilled in 2025?

- Very optimistic
- Optimistic
- Pessimistic
- Very pessimistic
- I don't know

16. What kind of action(s) can the European Commission take to monitor the development and take-up of connectivity in Europe in line with future needs?

Measures should be focused on reaching connectivity to all of the internet (and not parts of it), all the time and everywhere, while preserving and addressing concerns regarding the security, privacy and data protection of initiatives such as the Internet of Things or connected cars. In addition, zero rating programmes should be prohibited, as limited access to certain parts of the internet is not desirable and monopolies would be created.

The two first responses to question 15ab are somewhat misleading. The Commission and Member States should ensure:

- 1) complete territorial coverage, but not only as regards basic services. What are basic services and what are not?
- 2) why only ensure high-quality internet in populated areas?

The Commission should promote peer-to-peer networks such as Guifi.net (see <https://guifi.net/en/>), as they can achieve connectivity for all. "The project was developed in the center of Catalonia and has become the biggest free wireless network of the world. Despite its highly efficient and sustainable method to provide free and open internet access (even in areas where it is not served by regular telecoms operators), Guifi.net struggles with an administration which hinders this citizen-driven distributed solution. As a result, privately-owned services are promoted to provide internet access in public infrastructures" (see <https://guifi.net/node/23359>). cf. <http://comments.xnet-x.net/fcforum-2015/net-neutrality/>

Without prejudice to EDRI's recommendations above, the Commission should aim at

- 1) improving network transparency, so services and applications' performance is not monitored or manipulated by ISPs. In this sense, the Commission could promote research such as the one that led to "Glasnost: Bringing Transparency to the Internet" (see for instance <http://broadband.mpi-sws.org/transparency/bttest.php>).
- 2) collaborating with NRAs and BEREC to ensure access to the Internet remains open and non-discriminatory, in compliance with Regulation (EU) 2015/2120 of the European Parliament and of the Council of 25 November 2015 laying down measures concerning open internet access and amending Directive 2002/22/EC on universal service and users' rights relating to electronic communications networks and services and Regulation (EU) No 531/2012 on roaming on public mobile communications networks within the Union.

ADDITIONAL INFORMATION

Please upload any additional information, e.g. position papers, reports.

Any other comments?

Internet speed and quality are not the sole parameters that the Commission should take into account by 2020 and beyond. Speed and quality are important, but also full connectivity to the whole internet (not parts of it) for all, all of the time, in line with our recommendations above.
