

# The European Parliament's **FOUR STEPS TO NET NEUTRALITY** adopted by large majority in first reading

①

## **SPECIALISED SERVICES**

... clearly defined as an optimised service, over logically distinct capacity, **functionality requiring enhanced quality** from end to end, not marketed or usable as a substitute for internet access service

②

## **TRAFFIC MANAGEMENT**

... referring to management of traffic for **clearly and narrowly defined purposes**

③

## **OVERARCHING NON-DISCRIMINATION**

... implemented by **clear definition of net neutrality** as basis of definition of "internet access service" and ban on discrimination between functionally identical services

④

## **REMOVAL OF UNNECESSARY ELEMENTS**

... that are not part of Internet access services **and therefore irrelevant to the legislation**, such as unsolicited e-mail

## **COMPETITION INNOVATION RULE OF LAW NEUTRALITY**
