

# NET NEUTRALITY VS SPECIALISED SERVICES

SAVE  
THE  
INTERNET  
<https://savetheinternet.eu>

## IS THIS NET NEUTRALITY?

Specialised services can be given a "fast lane" if there is no impact on overall quality of Internet and if this is "necessary".

Net neutrality needs clear, enforceable, predictable limits on specialised services.

Will regulators strictly defend "best effort" Internet or will they allow big operators to kill the essence of the internet?

The proposed text isn't clear on what is necessary.

If no amendments are adopted, non-elected regulators will decide **after** the vote, if net neutrality will be protected.

### "BEST EFFORT"

is the foundation of the Internet - data are treated in a neutral way, as efficiently as possible.

Nobody knows - unless amendments are tabled to fix it.

### WHAT DOES THIS MEAN?

It means that regulators might accept "fast lane" services from online monopolies, killing net neutrality.
